

# Desktop App on OwnCloud

The desktop app allows users to access and synchronise files and folders from their OwnCloud, work on remote files directly from the desktop as if they were stored on their computer - because they are.

## Info

Continuous synchronisation to and from the OwnCloud server provides ease of use combined with extensive access control.

## Installing the Desktop App

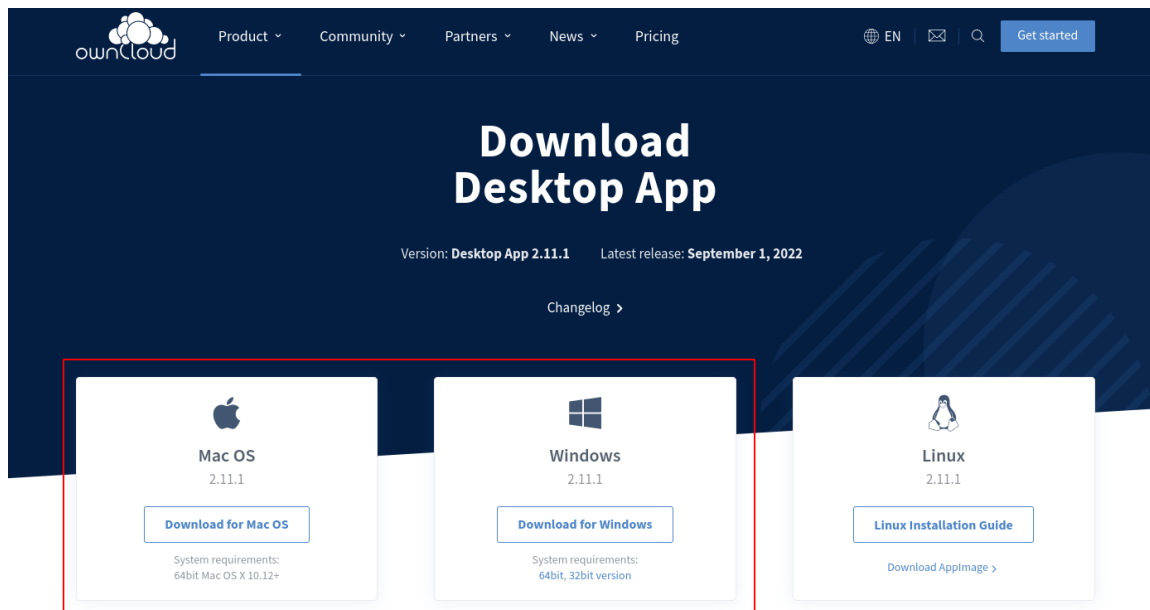

The Desktop App enables users to access and sync files and folders from their OwnCloud, work on remote files right from the desktop as if they were stored on their computer - because they are. Continuous synchronization to and from the OwnCloud server provides ease of use combined with comprehensive access control.

## Installation on Mac OS X and Windows

Installation on Mac OS X and Windows is the same as for any software application:

1. Download the installer in the next [URL](#)
2. Double-click it to launch the installation and follow the installation wizard.

After it is installed and configured the Desktop App will automatically keep itself updated

## Installation on Linux

For Ubuntu 22.04 follow the next steps:

Add (at least temporarily) a download repository. This requires registering trusted key. Run the following shell commands to trust the repository:

```
wget -nv https://download.owncloud.com/desktop/OwnCloud/stable/latest/linux/Ubuntu_22.04/Release.key -O - | sudo apt-key add -
```

Run the following shell commands to add the repository and install from there.

```
echo 'deb https://download.owncloud.com/desktop/OwnCloud/stable/latest/linux/Ubuntu_22.04/' | sudo tee -a /etc/apt/sources.list.d/owncloud.list  
sudo apt update  
sudo apt install owncloud-client
```

For another linux distribution continue to the next [URL](#).

## Using the Desktop App

The OwnCloud Desktop App remains in the background and is visible as an icon in the system tray (Windows, KDE), menu bar (macOS), or notification area (Linux).

## Used App Icons

The status indicator uses icons to indicate the current status of your synchronization. The green circle with the white checkmark tells you that your synchronization is current and you are connected to your OwnCloud server.

The blue icon with the white semi-circles means synchronization is in progress.

The yellow icon with the parallel lines tells you your synchronization has been paused. (Most likely by you.)

The gray icon with three white dots means your Desktop App has lost its connection with your OwnCloud server.

When you see a white circle with the letter "i" that is the informational icon, so you should click it to see what it has to tell you.

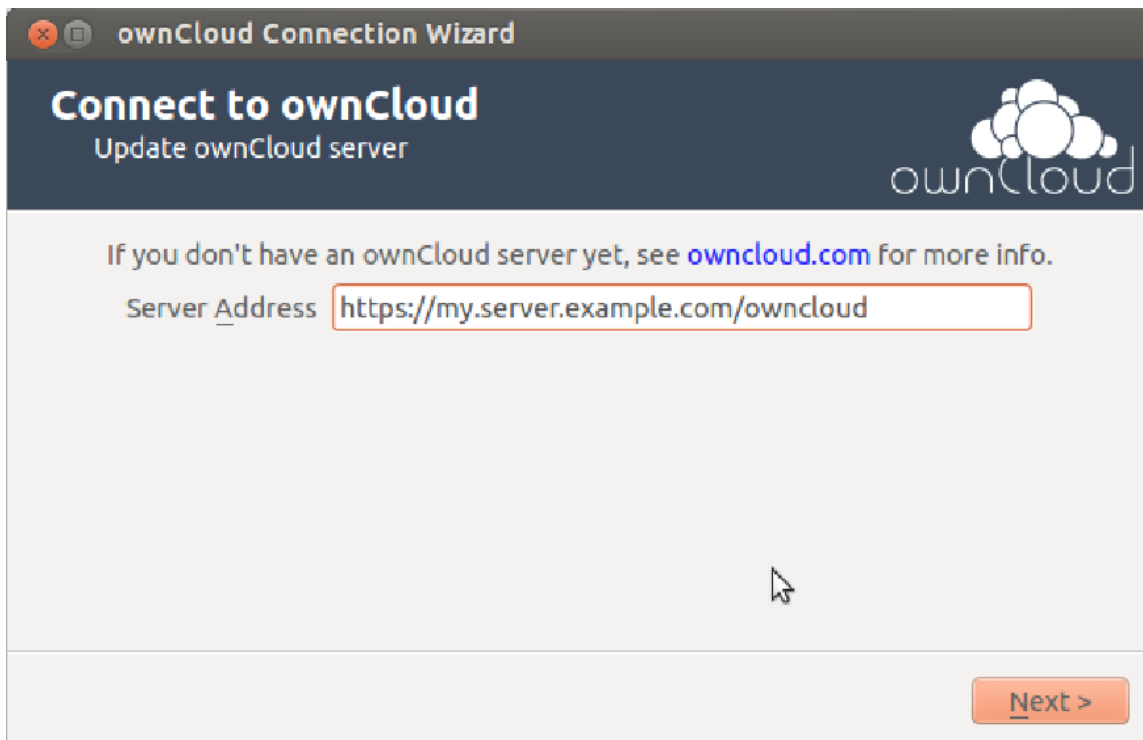

The red circle with the white "x" indicates a configuration error, such as an incorrect login or server URL.

## Setting up an account

If no account has been configured, OwnCloud Client will automatically assist you in connecting to your OwnCloud Server after the application has been started.

As a first step, specify the URL to your Server, just like you would when you open your OwnCloud instance inside a browser.

*In our case the URL would be <https://owncloud.iter.es> or <https://192.168.53.13>*

Next, you are prompted for your username and password. Again, use the same credentials that you would use to log on via the web interface.

ownCloud Connection Wizard

## Connect to ownCloud

Update user credentials

If you don't have an ownCloud server yet, see [owncloud.com](http://owncloud.com) for more info.

Username

Password

< Back   Next >

*In our case we will introduce our LDAP credentials of ITER.*

Finally, choose the folder that OwnCloud Client is supposed to sync the contents of your OwnCloud account with. By default, this is a folder called OwnCloud, which will reside in your home directory.
