# Desktop application in NextCloud

With this tool **folders and files in your NextCloud account can be kept in sync with a folder on the user's local computer**, similar to how other software tools (e.g. Dropbox) work.

## Installation of the desktop application

The NextCloud client is cross-platform, it can be easily installed on Linux, Windows and macOS operating systems.

### Installation on Linux

On Linux operating systems the Nextcloud client can be installed by executing the following commands in a terminal:

\$ sudo add-apt-repository ppa:nextcloud-devs/client\$ sudo apt update\$ sudo apt install nextcloud-client

It is also possible to download the programme installer for Linux from the Nextcloud client download page: https://nextcloud.com/install/#install-clients

#### Info

Once installed, it is necessary to configure the tool on the first run.

### Installation on Mac OS X and Windows

Installation on Mac OS X and Windows is the same as for any software application:

		DOWNLO	DAD FOR DESKTOP		/	
DOWNLOAD FOR DESKTOP Connect to your Nextcloud from Vindows, macOS or Linux.		Use the desktop clients to keep your files synchronized between your Nextcloud server and your desktop. Select one or more directories on your local machine and always have access to your latest files wherever you are. Learn more about our clients here.				
			ndows 10 64 bit :OS 10.14+, 64 bit (	(universal)	💧 Linux Applmage	

- 1. Download the installer at the following  $\ensuremath{\text{URL}}$
- 2. Double click on it to start the installation and follow the installation wizard.

# Using the desktop application

The NextCloud desktop application remains in the background and is visible as an icon in the system tray (Windows, KDE), in the menu bar (macOS) or in the notification area (Linux).

Application icons used

The status indicator uses icons to indicate the current status of your synchronisation. The green circle with the white check mark indicates that your synchronisation is in progress and that you are connected to your Nextcloud server.

The blue icon with the white semicircles means that synchronisation is in progress.

The yellow icon with the parallel lines tells you that the synchronisation has been paused (most likely by you).

The grey icon with three white dots means that your desktop application has lost connection to your NextCloud server.

When you see a yellow circle with a "!" sign in it, that's the information icon, so click on it to see what it has to tell you.

The red circle with the white "x" indicates a configuration error, such as an incorrect login or server URL.

### Set up an account

The setup wizard guides you step by step through the configuration options and account setup. First, you must click on the "log in to your NextCloud" button.

Now you must enter the URL of the NextCloud server.

In our case the URL would be https://nextcloud.iter.es or https://192.168.53.13

The following screen will now appear and you will be redirected to the browser to log in with the same credentials you would use to log in via the web interface.

Finally, choose the folder with which the NextCloud client should synchronise the content of your NextCloud account.

📀 Add Nextcloud account	×
Felix Weilbach       Kextcloud         cloud.nextcloud.com       Nextcloud         298 GB free space	
<ul> <li>Use virtual files instead of downloading content immediately</li> <li>Synchronize everything from server (139 GB)</li> <li>Ask before syncing folders larger than 500  MB</li> <li>Ask before syncing external storages</li> <li>Choose what to sync</li> </ul>	
Skip folders configuration < <u>B</u> ack Conne	ct

After clicking "Connect", NextCloud Client will start the synchronisation process.

If everything went well you should see the following icon in your system icons:
